Just Add Power devices broadcast their IP address to connected devices. Using a program that can detect those broadcasts, the IP address can be discovered.

- 1. Bonjour Browser is a program that can detect IP address broadcasting. It is included in every 2G firmware download on the Just Add Power website. Go to <u>www.justaddpower.com</u> and download a 2G firmware file.
- 2. Open Bonjour Browser and select the Web Server (HTTP) option in the Services box. Any attached devices will show up in the window to the right.
- 3. Just Add Power Transmitters will display as <u>ast-gateway</u>, and Just Add Power Receivers will display as <u>ast-client</u>.
- 4. Change the IP address of the computer to be in the same IP range as the Just Add Power device.

Bonjour Browser with 1 attached Receiver at factory default

- a. For Just Add Power devices at factory default, set the computer's IP to <u>169.254.100.200</u> with a subnet mask of <u>255.255.0.0</u>.
- b. For Just Add Power devices not at factory default, set the computer's IP so that it has the first 3 numbers the same and the 4<sup>th</sup> number different, with a subnet mask of 255.255.0.

Example: Just Add Power IP address – 192.168.100.129 Set computer IP address – 192.168.100.200

5. Open a web browser – Google Chrome is preferred – and type in the IP address of the Just Add Power device as shown in the Bonjour Browser. The page will open

## Web Interface Tools

#### **Check Firmware**

The firmware version is on the page first shown when accessing the web interface. <u>ALL</u> Just Add Power devices <u>MUST</u> be on the same version of firmware in order to communicate with each other.

#### **Update Firmware**

For instructions on how to update firmware, please go to <u>www.justaddpower.com</u>, download the desired firmware, and follow the <u>Firmware Update Instructions</u> included in the download.

#### **Reset to Factory Defaults**

The second second	14.1.1.M. 14.1.M. 14.3.1.M.	
1	Setem Video Walt Network Functions	
	Version Information:	
	Update Firmwate:	
12	* Ubibes:	-
	Commands	
	Factory Default Reboot	10
2		
	Reset EDID to Default Value:	
	© Default OVI EDID © Default VGA EDID	_
	Apply	-
A.C.		
	Console API Command	
2	Арріу	-
	Output	

To reset a Just Add Power device to default settings:

- 1. Access the web interface
- 2. On the <u>System</u> tab, select the <u>Utilities</u> bar
- 3. Click the Factory Default button. The device will reboot automatically in factory defaults.
  - Factory Default does not return EDID to the default value, even though the screen shows it does. The EDID must be reset separately.

#### **Reboot**

C. Carlos		15.1.1.1.	100

2		мруну	
1 april	Console API Command		5
Nº C	Output	Αρρίγ	
			t

To reboot a Just Add Power device:

- 1. Access the web interface
- 2. On the System tab, select the Utilities bar
- 3. Click the Reboot button
- 4. Alternatively, unplug the power connector and reattach it to physically reboot the device.

#### **Change IP Address**

IP Se	tup					
	IP Mode:	Auto IP	DHCP	Static		
	IP Address:	169.254.5.52	1			
5	Subnet Mask:	255.255.0.0				
Defa	ult Gateway:	169.254.0.254				
					Apply	-
Casti	ng Mode					
Mult	ticast U	nicast			Apply	-
	20					

Just Add Power devices in default settings will auto-assign an IP in the 169.254.xxx.xxx range.

To change the IP address of a Just Add Power device:

- 1. Access the web interface
- 2. Go to the <u>Network</u> tab
- 3. Choose DHCP or Static
  - If Static is chosen, enter the desired IP Address, Subnet Mask, and Default Gateway.
- 4. Click Apply
- 5. Reboot the device to apply the new IP address permanently

ID Mode:	Auto IP	DHCP	Static	
I Moue.		Dirici	CLOBE	
IP Address:	172.16.128.2			
Subnet Mask:	255.255.0.0			
Default Gateway:	172.16.128.1			
				Apply
Casting Mode

#### **Change Serial Settings**

Enable Serial over	IP
peration Mode:	
🔹 Type 1 - Dumb	Redirection: (Recommended)
Any R5232 sent i	to a Transmitter is sent out all connected Receivers' R5232
TELNET directly 1	Mode: o part 6753 Clues discreto 3-way IIS333 access when TX/IIX are linked
Type 3 - CLI A	ccess:
Advanced comm	and-line access. Requires significant programming.
For advanced pro	oprammers ONLY.
udrate Setting for	R\$232:
audrate Setting for Baudrate:	<b>R5232:</b>
audrate Setting f <mark>or</mark> Baudrate:	RS232:
audrate Setting <mark>for</mark> Baudrate: Data bits:	RS232: 9600 • 8 •
audrate Setting <mark>for</mark> Baudrate: Data bits; Parity:	RS232: 9600 • 8 • None •
audrate Setting for Baudrate: Data bits: Parity:	R5232: 9600 • 8 • None •

The RS232 port on the back of every Just Add Power device can be used to send serial commands to attached devices. There are 3 Operation Modes available:

- Type 1 Dumb Redirection à DEFAULT
  - o Any RS232 input to a Transmitter is sent out all connected Receivers' RS232
  - o Any RS232 input to a Receiver is sent out the RS232 of the Transmitter it is watching
  - o Baudrate Setting <u>MUST</u> be the same on Transmitters and Receivers
- Type 2 Guest Mode
  - o TELNET directly to port 6752. Gives discrete 2-way RS232 access when TX/RX are linked
  - Gives individual control of each device through a control system and provides feedback
  - Baudrate Setting can be different for each Just Add Power device
  - o Just Add Drivers are automatically set in this mode (except for RTI)
- Type 3 CLI Access
  - o Advanced command-line access. Requires significant programming. For advanced programmers ONLY.
  - o Serial commands are applied through command-line of Just Add Power device at TELNET port 23
  - o Contact Just Add Power Support for more information
  - o Just Add Drivers for RTI is automatically set in this mode

To change the serial settings of a Just Add Power device:

- 1. Access the web interface
- 2. Go to the <u>Functions</u> tab
- 3. Go down to Serial over IP, choose the Operation Mode, and choose Baudrate Settings
  - If using Type 1, the Baudrate Setting must be the same on the Transmitter and Receiver in order for pass-through to work
- 4. Click Apply and reboot the unit
  - If having issues with serial pass-through after applying the correct settings, try using a Null Modem. The TX and RX pins on the receiving device may not match the TX and RX pins on the Just Add Power device.

00 00 00 00   00 00 00 00   00 00

To check the resolution being output by a Transmitter or a Receiver:

- 1. Access the web interface
- 2. On the System tab, select the Statistics bar
- 3. Scroll down to the bottom and look for the section called Video Timing Information

#### **Check EDID**

To check the EDID being used by the Transmitter, or to check the EDID of the Receiver-attached display:

- 1. Access the web interface
- 2. On the <u>System</u> tab, select the <u>Statistics</u> bar
- 3. Scroll down to the video section and look for EDID Used on the Transmitter, or EDID= on the Receiver

100 C		11.3.1.8

	Factory Default Reboot	
	Reset EDID to Default Value: Default HDMI EDID     Default DVI EDID     Default VGA EDID	
		Арріу
	Console API Command	
	Output	Apply

To reset the EDID to one of the default EDIDs (Transmitter only):

- 1. Access the web interface
- 2. On the System tab, select the Utilities bar
- 3. Select one of the EDIDs available (HDMI is the factory default) and click Apply
- 4. The EDID will change immediately, but the source device may need to be power cycled for it to pick up the new EDID.
